

**IN THE CLAIMS**

This listing of claims replaces all prior listings:

1. (Currently Amended) A display unit, comprising:  
a display panel including a substrate on which a plurality of display devices is formed,  
and a protective film formed directly on both the substrate and the plurality of display devices for protecting the plurality of display devices; and  
a flexible touch panel which (a) is composed of plastic films, (b) is directly bonded to a whole face of the display panel with an adhesive layer in between, and (c) detects contact with a suitable contact element thereon,  
wherein,  
the adhesive layer is in direct contact with both the protective film and one of the plastic films,  
each of the plurality of the display devices has an organic emitting layer and is made of organic electro luminescence material, ~~and~~  
the protective film seals the organic emitting layer ~~and includes at least inorganic material~~ , and  
the display panel is sealed of the flexible touch panel.
2. (Previously Presented) The display unit according to claim 1, wherein the touch panel is provided on a side where the display devices of the substrate are formed, and the display devices are sealed by the touch panel.
3. (Previously Presented) The display unit according to claim 1, wherein the touch panel has a structure includes two plastic films, in which respective transparent electrodes are formed, are layered so that the transparent electrodes are placed opposite to each other.
4. – 5. (Cancelled)

6. (Previously Presented) The display unit according to claim 1, wherein the organic layer includes a light emitting layer between a first electrode and a second electrode, and the display device is an organic light emitting device which extracts the lights generated in the light emitting layer from the second electrode side.

7. - 14. (Cancelled)

15. (Previously Presented) The display unit according to claim 1, wherein the suitable contact element is a finger or a pen.

16. (New) The display unit according to claim 1, wherein the protective film includes at least inorganic material.
